Environmental guidance and awareness

Introduction:

In order to reach the highest levels of environmental knowledge and culture with finding realistic solutions to many of the problems faced by environmental communities, it was decided to add an explanatory educational methodology in multiple ways that included many seminars, workshops and scientific lectures that seek to achieve sustainable development goals by the Deanship of the College of Energy and Environmental Sciences, Department of Environmental Science. Which is considered one of the most important and first sections in achieving these goals, as it is closely linked to the application of sustainable development on the ground.
